$$dp/dt = 0.5p - 450.$$

- (a) Find the time at which the population becomes extinct if $p(0) = 850$.
- (b) Find the time of extinction if $p(0) = p_0$, where $0 < p_0 < 900$.
- (c) Find the initial population p_0 if the population is to become extinct in 1 year.

1.3 - (1~6). In each of Problems 1 through 6, determine the order of the given differential equation; also state whether the equation is linear or nonlinear.
